

Semestergroupmeeting I

Aalborg Universitet
SLV 249

Sagsbehandler:
Dorthe Skree

Dato: 11-10-2023

Agenda:

1. Evaluation of courses
2. Messages from the coordinator
3. Projects
4. The semester in general
5. A.O.B.

Summary of Semester Group Meeting for Medicine with industrial specialization, 1th. semester 11. oktober 2023

Participants: Maj Schneider Thomsen (semestercoordinator), Anita Egholm (coordinator MMA) Dorthe Skree (secretary)

Other participants: Participating students: There were 3 BM students and one from MMA and none from TM (thus no direct comment on specific courses could be made.)

A few comments for MMA courses were added after the meeting.

This summary was drafted by Viktor Østergaard Kristoffersen (student representative) and quality controlled by the semester secretary and semester coordinator to ensure that it meets HST standards.

Ad 1. Evaluation of courses

Methods of Economic Evaluations in health care.

- Generally, there have been some lectures where a significant number of slides were empty instead of providing the definitions the lecturer used.
The lecturer argued that it would increase the students' engagement, but the students did not obtain the specific definitions afterward.
- There has been a significant amount of repetition of principles across the different lectures.

Marketing and Market Access for health care.

- MMA had an online lecture recently, which was relatively inefficient, as the specific lecture did not work in that format.
- A wish for more engagement of the students in the lectures.
This could be in more in-lecture assignments where the theoretical principles could be used in practice.

BM- Molecular and cellular Methods in Biomedicine

- No comments; it's okay.

BM- Molecular Pathogenesis

- Some of the lectures they had were the same as in the fifth semester of the bachelor's degree in Medicine with Industrial Specialization

Designing and Evaluating Pharmacological Research

- No comments

Quality improvement and Quality Assurance

- Maybe include more assignments and questions? In order to get more engagement in the lectures.

Ad 2. Messages from the coordinator

- Semester coordinator will give an update on the status of the seminar soon.
- We are in the process of organizing a lecture from Statens Serum Institut (SSI) on biosafety.
The lecture will be optional.

Ad 3. Projects

- No comments from the students about projects.

Ad 4. Th semester in general

- A lot of the students in the Biomedicine and Translational Medicine specializations feel stressed due to an overwhelming number of assignments and pre-lecture reading.
- Some students have felt too stressed to take part in lectures due to the feeling of falling behind on reading materials.
- The reading materials were proposed as obligatory for some lectures and as a way to familiarize with the material in other lectures.
- From second-hand, some TM students feel extra stress regarding the somewhat obligatory pre-lecture reading materials.
- Students would want to be able to book rooms earlier in the semester, but as explained by the semester secretary, this is currently not possible as groups need to be registered.

Ad 5. A.O.B

- No comments.
