

Study Board's Follow-up on Semester Evaluation E24

EPSH1/TEPE1/PED1/HWPS1/HYTEC1/MCE1

Response rate

76 %

1. Semester Structure and Planning

- Improved academic and social integration of international students is requested

Follow-up: The Study Board is establishing a social committee to organize social activities at the beginning of the first semester of the Master's programme.

- Several students comment that statistics is irrelevant for this specialization.

Follow-up: Statistics is a big part of the study programme i.e. in the projects and the Power System-course. The study board will ask the teachers to show more examples of the practical use of the course.

2. Project

- Suggestion to better prepare AAU bachelor's students for collaborating with international students on a PBL project.

Follow-up: It is the supervisor who should be prepared for the challenges – not our bachelor's students. We have a rule that a group may include up to two Danish students, in accordance with the group formation guidelines.

3. Courses

- *High Voltage Engineering and EMI/EMC:* Great lab exercises but some students wanted more calculation exercises in the course

Follow-up: The Study Board takes note of this.
